A Caian Survivor

by Professor John Mallon (1996)

On 18 April 1912, the Daily Mail reported the death of a Caian in a tragedy that gripped public imagination. This was not an ordinary Caian, it was Edward Wilson (1873), who found his body on the deck of a ship. The news spread quickly, and people wondered what had happened to Wilson.

The story began on 11 May 1912, when Edward Wilson embarked on a journey to the Antarctic. He was a scientist and an explorer, and his mission was to study the region and its inhabitants. However, the journey was not without its challenges. Wilson and his team faced harsh conditions and unexpected dangers.

On the day of Wilson's death, the ship was anchored in a small harbor, and the crew was preparing to leave. Suddenly, a thick fog descended upon the harbor, and visibility dropped to near zero. The crew tried to resume their work, but the fog made it impossible to navigate safely.

Then, out of the fog, a shape appeared on the deck. It was Wilson, and he was in distress. He had fallen ill, and he needed medical attention immediately. The crew rushed to assist him, but it was too late. Wilson passed away, and he was laid to rest on the deck of the ship.

Wilson's death was a tragedy, and it highlighted the dangers of exploration in remote and hostile environments. It also brought attention to the needs of the expedition, which was struggling to survive in the harsh conditions.

The story of Wilson's death became a symbol of the dangers of exploration, and it inspired many others to follow in his footsteps. Wilson's legacy lived on, and his work continues to shape our understanding of the Antarctic and its inhabitants.

Portrait of Lawrence Beesley

Beesley was one of the survivors of the Titanic disaster. He was a passenger on the ship, and he managed to escape the tragedy. Beesley's account of the event was published in a book called 'I Survived the Titanic'.

About Beesley: Born in 1877, Beesley attended the Royal Naval College and later joined the Royal Navy. During his career, he served in various capacities, including as a captain in the Royal Navy Air Service during World War I.

Beesley's story of survival during the Titanic disaster is a testament to the human spirit's resilience. His account of the event is a powerful reminder of the importance of remembering past events and honoring those who lost their lives.

The photo shows Beesley standing on the deck of the Titanic, looking towards the camera. The ship's lifeboats can be seen in the background, and the sky is cloudy.

The Titanic disaster was a tragedy that claimed the lives of over 1,500 people. It was a momentous event that changed the course of history, and it continues to captivate and inspire us to this day.
